EDUCATION

Boston University MET — M.S. Applied Business Analytics

Fall 2026 – Current (Expected Graduation Spring 2028)

University of California, Berkeley — B.A. Data Science, Emphasis on Cognition

Graduated 2025

SKILLS

SQL, Python, Pandas, NumPy, Scikit-learn, PyTorch, R, PostgreSQL, MySQL, Tableau, Excel, MATLAB

RELEVANT EXPERIENCE

AI Model Quality Analyst | Micro1

May 2026 – Current

- Evaluated paired AI-generated responses to realistic, user-style prompts against a detailed multi-category rubric, scoring each category and recommending the stronger response with written justification.
- Tracked quality trends across evaluated datapoints to identify recurring failure patterns and reported findings to the client, informing model improvement priorities.
- Translated qualitative evaluations into data-backed feedback and recommendations on AI performance by category, and flagged rubric ambiguities that led to clearer standards.

Business Intelligence Analyst Intern | GiDATA

Aug 2025 – Jan 2026

- Conducted trade volume analysis across currency pairs and brokers using SQL, identifying settlement risk concentrations; visualized findings in Tableau dashboards, cutting executive decision turnaround time by 25%.
- Analyzed SQL extraction performance across transaction databases, identifying inefficient joins and missing indexes; restructured query logic to accelerate monthly compliance reporting by 35%.
- Conducted data quality analysis on FX trade records to detect duplicate and failed-trade patterns during peak trading windows.

Data Science & Product Strategy Intern | BLCK UNICRN

May 2024 – Aug 2024

- Conducted SQL cohort analysis to track subscription patterns, identifying a post-onboarding churn spike; recommended a strategy shift from acquisition to retention, visualized in Tableau.
- Identified drop-offs from fragmented CTA flows and collaborated cross-functionally to restructure the landing page, reducing churn by 18%.
- Conducted cost-revenue analysis to determine the most profit-generating products, identifying KPIs and delivering findings.
- Applied Google Analytics A/B testing to model user response patterns, optimizing marketing copy and targeting to drive measurable gains in click-through and conversion rates.

Consulting Analyst | League of Women Voters of Oakland

Jan 2023 – May 2023

- Designed ZIP-level choropleth maps in Folium to surface member distribution and diversity gaps, offering non-technical leadership an intuitive alternative to traditional dashboard-style reporting.

- Designed and deployed a member demographic survey; cleaned and analyzed responses to identify behavioral drivers of engagement and establish baseline diversity metrics.

Consulting Analyst | Ody's Aviation

Aug 2022 – Dec 2022

- Drove collaboration with Delta Air Lines through ETL-based analysis of large-scale passenger and flight datasets, projecting a 2.4% annual revenue increase from eVTOL fleet integration.
- Used pandas to analyze multivariable long-distance demand patterns across regional and hub airports, identifying key levers for hub strategy optimization.
- Developed a Point-to-Point service model by analyzing transportation flow data and mapping high-demand corridors to quantify market expansion opportunities.

PROJECTS

U.S. Renewable Energy and Emissions Analysis Project

- Applied t-tests with multiple-comparison corrections and OLS regression to evaluate the relationship between renewable energy adoption and emissions trends.
- Used Python for data cleaning, feature engineering, and exploratory modeling, producing insights to support renewable energy policy recommendations.

Sentiment Trend Modeling of ChatGPT Tweets Using NLP Techniques

- Performed sentiment analysis on ChatGPT-related tweets using NLP preprocessing techniques to quantify public sentiment trends.
- Used Python (langdetect, wordcloud) to preprocess and analyze large volumes of tweet data for sentiment insights.
- Evaluated shifts in sentiment over time using comparative analysis and A/B testing, identifying a decline in positive sentiment across cohorts.
